1. E(Br) = St SB

 $\beta_{\tau} = \operatorname{argmin}_{R} (Y - X\beta)^{T} (Y - X\beta) + \tau \beta^{T} \beta$

Now, by hypothesis $Y = X\beta + E$, where $E \sim N(0, 116^2)$ so Y is just a shifted normal vector $Y \sim N(X\beta, 11 \cdot 6^2)$

The solution is $\hat{\beta}_{\tau} = (x^{T}X + \tau 1)^{-1} x^{T}y$

proof:

2.
$$H_{p}$$
: $\frac{2}{\partial \beta} \sum_{i=1}^{N} (y_{i}^{\dagger} - \chi_{i} \beta)^{2} = 0$
